

# Srinivasan Rajappa

(716) 907-2239 | [srajappa@buffalo.edu](mailto:srajappa@buffalo.edu)

## EDUCATION:

**Master of Science**, Computer Science,  
**University at Buffalo, State University of New York, Buffalo, NY**  
**Bachelor of Technology**, Computer Science and Engineering,  
**Jaypee University of Eng. and Tech**, Madhya Pradesh, India

(June 2016)

(May 2012)

## SKILLS:

- **Software Languages:** C/C++, Java, Python, PL/SQL, R, Elixir, MATLAB
- **Database:** PostgreSQL, MySQL, MongoDB, Oracle 9i/11c
- **Web & Other Technologies:** JavaScript, Underscore.js, HTML, CSS, Modal, Bootstrap, AJAX, JSON, XML, TCP/IP
- **Frameworks:** Phoenix Web-framework, Hadoop Framework, Python Django
- **Tools and Operating Systems:** Git, Eclipse, Linux, Windows, Mac

## WORK EXPERIENCE:

**Teaching Assistant of Dr. Bina Ramamurthy (Dept. of Computer Science), University at Buffalo**

(Spring 2016)

- Prepared tutorials and blogs on topics ranging from Pig, MapReduce, Spark, Ganglia and Hue of the Hadoop eco-system.
- Held sessions for students in class rooms and class forums for resolving issues and clearing doubts.
- **Skills Gained:** running applications on large dataset in AWS, data visualizations for large clusters, design implementation.

**Software Engineer Intern at Zappos.com**, Buffalo, NY

(Co-op Fall 2015)

- Single handedly migrated the database (from MongoDB to MySQL) of many dashboard applications at Zappos.
- Architected and augmented the underlying database for transition to the new relational database.
- Created scripts (Python) to convert Collections to SQL data dumps. Successfully deployed the applications to production.
- **Skills Gained:** creating and debugging SOA apps created in MVC (Phoenix Webframework), using NoSQL databases.

**Software Engineer (Operation Support System) at Accenture Services Pvt. Ltd.**, Bangalore, INDIA (March 2013 - July 2014)

- Provisioned new telecom services for Wind Italy viz. Telephone number portability, 4G transition & High-Speed Broadband.
- Responsibly handled database of the system for provisioning and validation of network services in real time.
- Served the role of Database Administrator and stewarded oracle database replications and tune up.
- Part of the team that created applications to simulate the end-to-end provisioning by creating stored procedures, triggers etc.
- Presented a live seminar on role of Operations Support Systems in Telecom industry. Event attendance ~700.

## TECHNICAL PROJECTS [GitHub - <https://github.com/srajappa>]

**Remote File sharing Application** (Computer Networks)

- POSIX style application that allowed systems to join a P2P network and perform transfer of files and texts.
- Implemented run time TCP socket connections among hosts and also console operations using **select()** call.
- Tested and debugged by deploying application on five servers. The application is scalable for over 10 devices. [C/gdb]

**Implementing SQL Query evaluator** (Database Systems)

- Console application that could evaluate SQL DDL and DML statements viz. SELECT, PROJECT, JOIN, UNION etc.
- Added enhancements which enabled the application to run on a constrained memory space.
- **Skills Gained:** using design pattern (Visitor Pattern), TPC-H benchmarking, External Sort, Berkeley DB, jsqparser etc.[Java]

**Simple Amazon DynamoDB** (Distributed Systems)

- Implemented Key-value storage system, with the help of several android virtual machines.
- Incorporated data replication for data availability and used Chord protocol for ring based routing and partitioning.
- Application was tested using automated tests and was scalable up to 5 devices.[Android, Java]

**Supreme Court-Case Viewer** (Software Engineering) Application

- Worked with team members to create an android application for displaying daily cause-list posted in Supreme Court.
- Responsible for the front-end section of the application, which was created using PhoneGap mobile application framework.
- Worked on web-scraping scripts (PHP) to download data from the Supreme Court websites.

**Facebook Public Page's video aggregator** (Hobby Project)

- Created web application that displays video of a public Facebook page. Metadata related to the particular video is also shown.
- The application requires a user to login via facebook, in turn making Graph API requests for videos of a particular page.
- Videos will be appended as the user scrolls to the end of the page.[Graph API, Javascript, Underscore.js, Modal]
